Dr. Michael Ireland, University of Southern Queensland, Australia

Dr. Ritu Singh, G.B. Pant University of Agriculture and Technology, India

ICSP 2019 was a great success and we expect for ICSP2020 to exceed it!

In addition to existing presentations, ICSP2020 will host award winning workshops conducted by former rock stars:

1) Rock to Recovery: Experience the Powerful Healing of Playing in a Band

One of the challenges facing mental health professionals is getting people to stay in treatment for sufficient time for the treatment to have an impact. To attain positive treatment outcomes, professionals can include complementary therapies in treatment protocols. Rock to Recovery is a music program that has proven results motivating individuals to stay in treatment and engage in their recovery process more fully. How? Rock to Recovery harnesses the power of playing music and singing. By engaging in group process writing a song, performing it, and uploading it to the web as a touchstone and reminder of a positive experience, Rock to Recovery participants, mostly non-musicians, are able to reap the neurological benefits of playing music. This is an interactive session, in which participants will have the opportunity to participate in the rockstar songwriting process. By the end of the session, the participant will be able to:

1. Identify how music has positive short-term effects on mood and attitude.
2. Detail the ways in which music programs can keep people in treatment for mental health concerns and motivate them to participate more fully in their recovery.
3. Engage with music in new ways to use music to promote health and healing.
4. Use musical performance to change personal perception of life's challenges.

2) Core Energetics: Dislodging Emotion Trapped in the Body

Neo-Reichian and other somatic theories suggest that trauma and emotions get trapped in the body, causing the blockage of energetic pathways (similar to principles of qi in Traditional Chinese Medicine or Ayurvedic prana). This energetic dysfunction can have profound psychospiritual repercussions. Breathwork and somatic processing can be used to treat trauma, addiction, depression, and anxiety, and aid in improving emotional well-being. This process is especially well-suited for clients with profound or persistent dissociation, expressed in talk therapy. In this session, participants will learn about somatic processing, particularly Core Energetics, and in a group, engage in the use of holotropic breathwork. By the end of the session, the participant will be able to:

1. Define higher self, lower self, and mask concepts.

2. Detail the ways in which holotropic and other kinds of breathwork connect mind and body and clear energetic pathways.
3. Use breathwork to improve perspective on life's difficulties

ICSP2020 is proud to partner with ONEWORLD, as the official airline alliance of the conference, offering up to 20% discount on airfares to the ICSP2020 participants and accompanying persons.
