

The Twelfth International Conference on The Constructed Environment -- a conference organized by the Constructed Environment Research Network and the University of Monterrey.

----- A BLENDED CONFERENCE

The Constructed Environment Research Network was founded with a commitment to providing innovative spaces for Research Network members to interact, converse, and learn from each other. In this critical moment, we must re-imagine the scholarly conference. We should consider our climate impacts, public health obligations, the need to dismantle the enduring blockages of access and participation for segments of our local and global communities, while at the same time supporting the development of meaningful personal relationships.

We are taking on these challenges by offering a blended conference experience, with session types explicitly designed to make the most of both online and in-person social knowledge processes. In conversation with our Research Network Members, we have been reflecting upon the kinds of scholarly conferences we need for our sustainable social futures.

Our blended conference experience is delivered on the CGScholar platform – developed by the Common Ground Media Lab, the research and technology arm of Common Ground Research Networks. This way we build for our Research Network Members flexible, and at the same time resilient, spaces for communication, engagement, and participation.

Place: Online + University of Monterrey, Monterrey, Mexico

Format: A mix of live, pre-recorded, and in person (at scale that's allowed) presentations and social interaction spaces.

Dates: 28–29 April 2022

----- CALL FOR PAPERS

The Constructed Environment Research Network is brought together by a common concern for the science of, and social responses to, climate change. We seek to build an epistemic community where we can make linkages across disciplinary, geographic, and cultural boundaries. Constructed Environment Research Network features research addressing the following annual themes and special focus:

Theme One – The Design of Space and Place

Theme Two – Constructing The Environment

Theme Three – Environmental Impacts

Theme Four – Social Impacts

----- RELATED CONFERENCES

We understand travel is difficult in the current climate. For this reason, we also offer related thematic events in our sister Research Networks that you might be able to attend in-person. This way we build for our Research Network Members flexible, and at the same time resilient, spaces for communication, engagement, and participation.
